

Subject Line: Action Required: WebFOCUS Reporting

Hello WebFOCUS Reporting User,

Our records show that you're a frequent user of WebFOCUS reports to pull information from the mainframe computer.

WebFOCUS is one of the tools that is being replaced as a result of the ConnectCarolina and InfoPorte go-live of last October. The ConnectCarolina and InfoPorte teams' first priority is to identify all WebFOCUS reports that pull information from the mainframe computer. That's because the mainframe computer is being turned off after **October 31, 2015**. Reports that don't pull information from the mainframe computer can continue running a while longer.

Note: The Legacy Systems webpage on ccinfo.unc.edu previously communicated a later date, but October 31 is the correct date.

We need your input

Before WebFOCUS is turned off, the ConnectCarolina team wants to work with you to make sure your reporting needs are met. To help us meet that goal, please send the following information to **Mimi Bennett** at mimi_bennett@unc.edu by **September 18**.

- Please send a sample of each report you use.
- Tell us how frequently you run it.
- Tell us the navigation path for how you get to the report and how you run it (for example, do you run the report from a drop-down list, from Managed Reporting, or from WebFOCUS Developer Studio).

Accessing historic information

Historic information is available in the legacy data warehouses and other sources. We will be communicating details about the best way to access historic information soon.

Want more info about what's happening with the legacy systems?

The [legacy systems page](#) on the ConnectCarolina users' website is a central place to check on the systems you are most interested in. We'll update it as decisions are made and as more information comes in.

Thank you in advance for your time!

--The ConnectCarolina and InfoPorte Teams
