**RE:** Fringe projections now available in InfoPorte

**DT:** April 21, 2015

A new report in InfoPorte was released on Monday, April 6, that projects labor expenses through the end of the fiscal year. Effective April 20, in addition to salary earnings, benefit and tax projections are now available in this report.

To recap, the salary projections report is meant to provide an estimate of anticipated labor-related costs. Costs are projected out through 6/14/15 for biweekly and 6/30/15 for monthly, regardless of funding end date. Individuals who manage sponsored projects for which the project end date is later than June 30, 2015, may use information on anticipated costs per month to calculate anticipated labor costs after that date. By the end of the fiscal year, we plan to have more robust and accurate labor projection reporting available through the funding end date, whether that is the end of the fiscal year or the project end date.

Contact the Business Systems Help Desk if you have questions about this report.
